

Project proposal

Open Data – Road accidents visualization

Noah Cohen, Tomáš Pouzar

Summary

We would like to implement a simple web application visualizing road accidents in different regions of Italy. On a homepage users would see a colorful heatmap of Italy, where they could explore details of all regions across the years. After registration or login, user will be able to download any set of available data.

Data source

We want to use and visualize this set of data: <http://dati.istat.it/index.aspx?r=34497>

Technology

Frontend: Html, CSS, JavaScript, jQuery and JavaScript Maps from [AMCHARTS](#).

Backend: Java, PostgreSQL and Tomcat server
